

Menu Board Conversion

Easily convert your existing, front-lit menu boards to energy efficient, back-lit **Flat Panel LED's**

VGS

This document will provide detailed instructions on how to easily convert your existing, front-lit menu boards into high impact, back-lit Flat Panel LED's.

Internally illuminated Flat Panel LED's are:

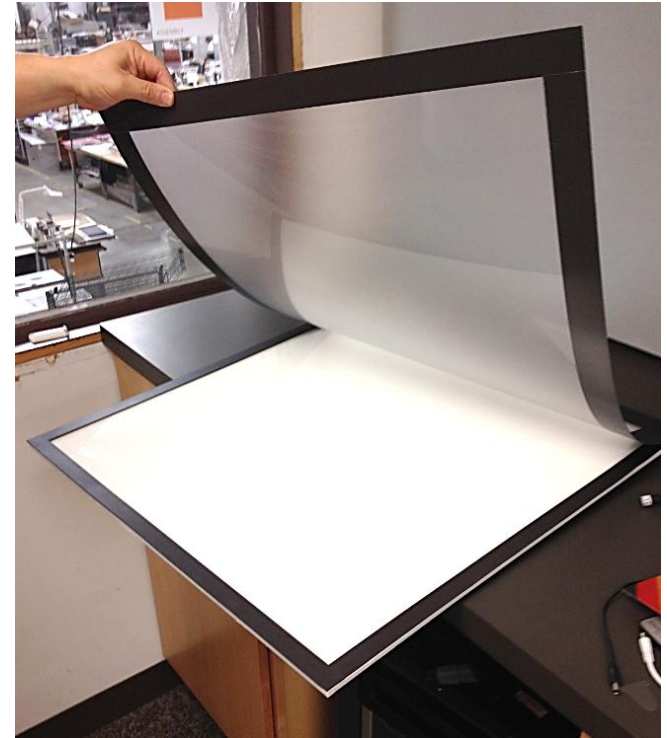

- Ultra slim and fit perfectly with your existing menu board design
- Energy efficient – LED edge technology
- Customized with Subway specific trim colors
 - Tuscany Green/Metro Black
- **An economical way to visually enhance your merchandising opportunities**

VGS

The Flat Panel LED still features MagaFrame™ technology – making it easy to change full-sheet graphic inserts as often as necessary.

An upper bracket, combined with side and lower high-powered magnets, holds the panel securely to your existing unit – without the need for tools or additional hardware.

Step One

Remove the old paper insert from the existing panel you'll be replacing. Then, utilizing the MagaFrame™ technology, place your new duratrans graphic into the NEW Flat Panel LED.

NOTE: a duratrans color transparency graphic will emit a more vibrant glow.

Step Two

Carefully lift the unit – aligning it with your existing menu board. Place the top bracket on to the top of your existing hardware – making sure it's secure. Then slowly lower the entire unit over the face of your menu board. The high-powered magnets will “click” – holding it tightly.

Step Three

The power supply is in the upper right hand corner and should be run through the existing circular “knock-out” in your menu board unit. Attach the supplied power cord (not shown) to any standard outlet.

VGS

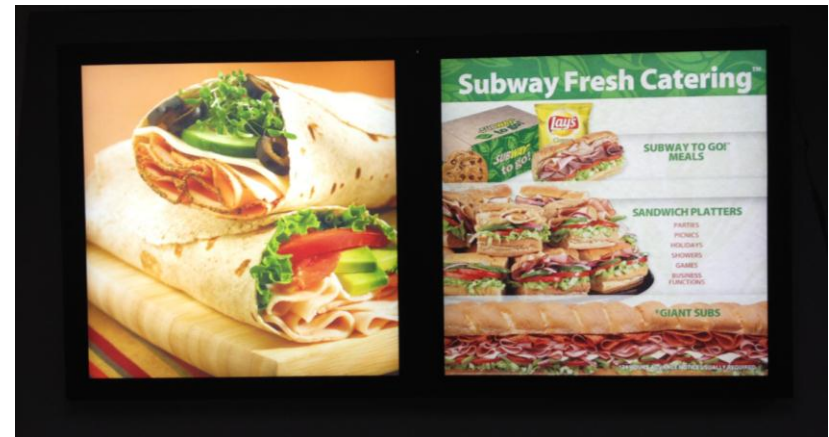

Final conversion next to a standard MagaLens® panel.

Option

Double Flat Panel LED's are also available for a full conversion. Installation is the same as the single panel.

Check out this video on YouTube to see the complete conversion.
