

Sustainable SOLUTIONS

RENEWABLE & INNOVATIVE
PACKAGING SOLUTIONS

Our Story

All products are produced in a closed-loop water recycling facility, thereby eliminating wastewater discharge.

HC's sustainable solutions are rooted in our long-standing history of servicing the horticultural industry. With a desire to be more environmentally friendly while further differentiating our product portfolio in this highly competitive segment, HC's molded pulp growing containers helped pave the way for our eventual entrance into the sustainable packaging market.

For over 30 years, our 46,000 square foot manufacturing facility in Burlington, Ontario, has been the exclusive producer of our sustainable solutions. We believe in a legacy of value for our business and our industry by keeping things accessible to anyone

in the market, whether they have already committed to corporate social responsibility or need help getting started.

It is exciting to recalibrate and adapt existing products into more sustainable solutions while taking incremental steps to do better today than we did yesterday. We are constantly challenging ourselves to make each transition seamless.

Our products include various designs, applications, and customization so that every customer is provided the option to purchase sustainably and responsibly for their own unique goals.

Certifications & Partnerships

HC is proud to be a certified partner of these esteemed organizations for our line of fiber protective packaging solutions.

FOREST STEWARDSHIP COUNCIL® (FSC)

Products that bear the "FSC® 100% Recycled" designation have been verified as being made from 100% recycled content (either post-consumer or pre-consumer reclaimed materials). The use of FSC Recycled products can help to alleviate the demand on sources of virgin material, thereby helping to protect the world's forests. Choosing products with the FSC designation ensures that both customers and organizations are doing their part to preserve forests across the globe.

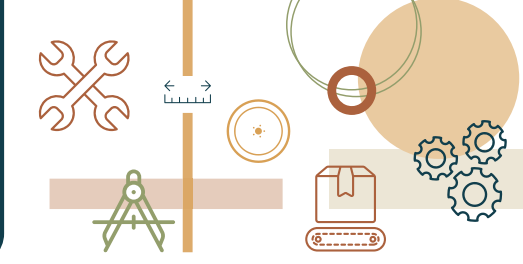

USDA BIOPREFERRED® PROGRAM

The USDA Certified Biobased Product label is designed to provide useful information to consumers about the biobased content of the product. The label assures a consumer that the product contains a USDA-verified amount of renewable biological ingredients. Biobased products are derived from plants and other renewable agricultural, marine, and forestry materials. Biobased products generally provide an alternative to conventional petroleum derived products and include a variety of offerings such as lubricants, detergents, inks, fertilizers, containers, and bioplastics.

Proud member of the Sustainable Packaging Coalition® sustainablepackaging.org

HC'S 4 ENVIRONMENTAL THEMES

BIODIVERSITY

Ensuring appropriate measures are considered ranging from design, usage, after-use, and beyond. We are committed to doing our part in maintaining and encouraging the stability and integrity of our ecosystem.

WATER

From water use optimization to closed-loop water processing within our operations, we recognize that water is among the most vital components to our future.

WASTE

By incorporating certified recycled and reprocessed content into our products, we're committed to diverting waste and designing products for additional lifecycles.

EDUCATE & ENGAGE

We're committed to sharing our story and explaining why our philosophy is so important. Additionally, it is our responsibility to communicate how our products are used and disposed of so everyone can make more informed decisions with comfort and ease.

→ Our molded-pulp protective packaging solutions utilize post-consumer and post-industrial papers and cardboards.

FAQ'S

Why choose fiber protective packaging?

The material provides superior protection, such as cushioning properties, while also protecting against the elements by absorbing moisture while in transit without compromising the integrity. HC's third-party certifications help validate an organization's overall sustainable commitments.

Are your products recyclable?

Yes. We've purposefully blended our material to ensure repulpability along with acceptance by recycling facilities and curbside programs, following the requirements of traditional paper/cardboard recycling. Please check with your local municipality for specific recycling requirements and accepted materials.

How long will it take for your fiber molded pulp products to break down?

The exact duration of time will vary depending on your individual environmental conditions and thickness of each product. Generally, our fiber products will break down in less than two years.

How can I obtain a sample of your fiber molded pulp products?

Please reach out to our Customer Service Team at customersupport@hc-companies.com for product samples or additional specifications.

The Path to Using *Recycled Content*

Benchmark & understand your current use of recycled content

Set goals to use recycled content (can be internal or external)

Engage your supply chain partners to see what is possible

Work to make recycled content part of your culture

Creatively troubleshoot any problem areas

Communicate & build-on successes
